

## Samsung Call Reporting and Call Reporting Solution Update

The latest version of SIP trunk call recorder (P/N NES-BL-A370/UK) has been enhanced to enable the ability to either automatically or manually stop and start the recording of the trunk. This overcomes issues that can arise when there is no identification of the caller if the call has been processed through the system and this information has been replaced.

We have also reflected the increase in costs to provide onsite installation and training services with a price increase of P/N NES-BL-A023/UK to £595, which is still a very competitive cost for what is provided.

If you have any quotations that are affected by this change please notify your Samsung account manager who can make arrangements to support your quotation for a 30 day period.

### Could your sales benefit from your own sales team using the products that they sell?

Equip your own office with the Samsung Call Recording solution at very special pricing.

This special offer is limited to one per reseller and must be installed at your offices.
